I Methodology

1.

Assumptions

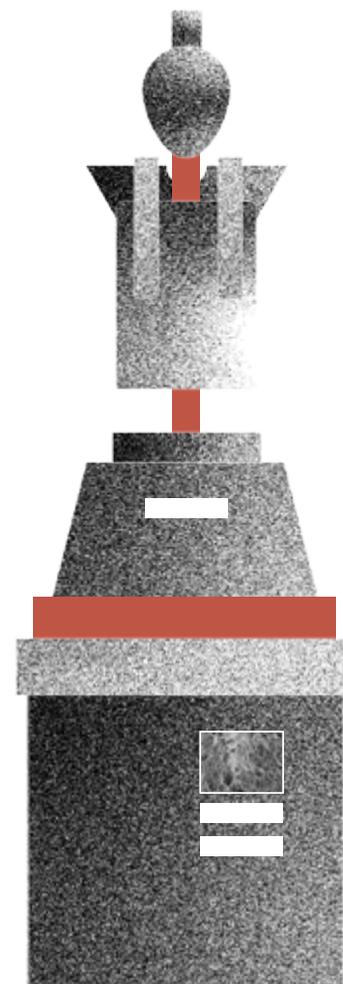

Museum Statistics is an electronic survey addressed to Polish museums and entities conducting museum activities. It has been carried out annually since 2014 by the National Institute for Museums and Public Collections (NIMOZ, Narodowy Instytut Muzealnictwa i Ochrony Zbiorów), with the support of the Ministry of Culture and National Heritage.

Every year, the *Museum Statistics* project uses the same research tools to allow for the annual comparison of data. Although it is **voluntary**, the survey has attracted a representative group of institutions participating in each edition.

The aim of the data collection and data analysis is to:

- » Monitor the activities and the operation of museums and entities conducting museum activities;
- » Provide in-depth knowledge about museology in Poland;
- » Track and compare changes occurring over the years;
- » Facilitate the development of support methods for museums and entities conducting museum activities;
- » Obtain data in areas of priority for the Ministry of Culture and National Heritage, and NIMOZ.

The collected data and data analyses are used in publications, reports and studies prepared in cooperation with experts.

2.

Study population

The *Museum Statistics* project is addressed to Polish museums and entities conducting museum activities. The questionnaires are prepared in two forms: one for **cultural institutions** (with ministers, heads of central offices or local governments as organising authorities) and one for entities without the status of a cultural institution.

This report presents the data separately for:

- » **Museums** within the purview of the Act on Museums of 21 November 1996 (defined as institutions which have their statutes or rules and regulations approved by the Ministry of Culture and National Heritage);
- » **Entities conducting museum activities** (which have not agreed their documents with the Ministry of Culture and National Heritage, and therefore cannot be recognised as museums within the purview of the Act).

The index of museums to be included in the survey is constantly updated based on the List of Museums maintained by the Ministry of Culture and National Heritage, and the database of entities conducting museum activities compiled for the purposes of the *Museum Statistics* project. Given that the museum sector is subject to constant changes – with new entities appearing or disappearing from the museum map – both sources are regularly verified and updated.

In January 2021, a total of 1,230 museums and entities conducting museum activities were listed in the NIMOZ database (altogether 1,513 institutions, together with branches).

As of 4 January 2021, the official number of **museums** (as defined in the Act on Museums) on the List of Museums maintained by the Ministry of Culture and National Heritage was **906**.

The figures below present information on all museums (as defined in the Act on Museums), divided into cultural institutions and museums without the status of a cultural institution.

Figure 1. Sources of funding and the number of managing authorities (as of 4 January 2021)

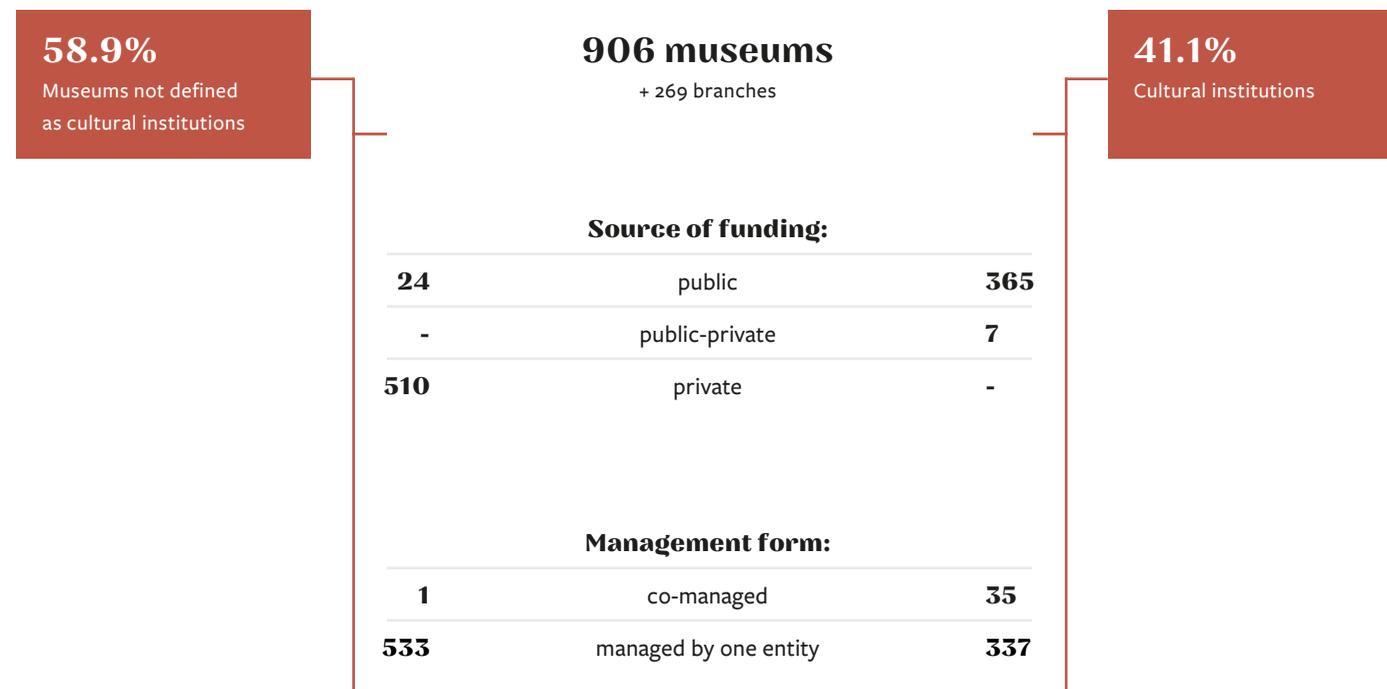

Figure 2. Cultural institutions and museums not defined as cultural institutions – by voivodeship (as of 4 January 2021)

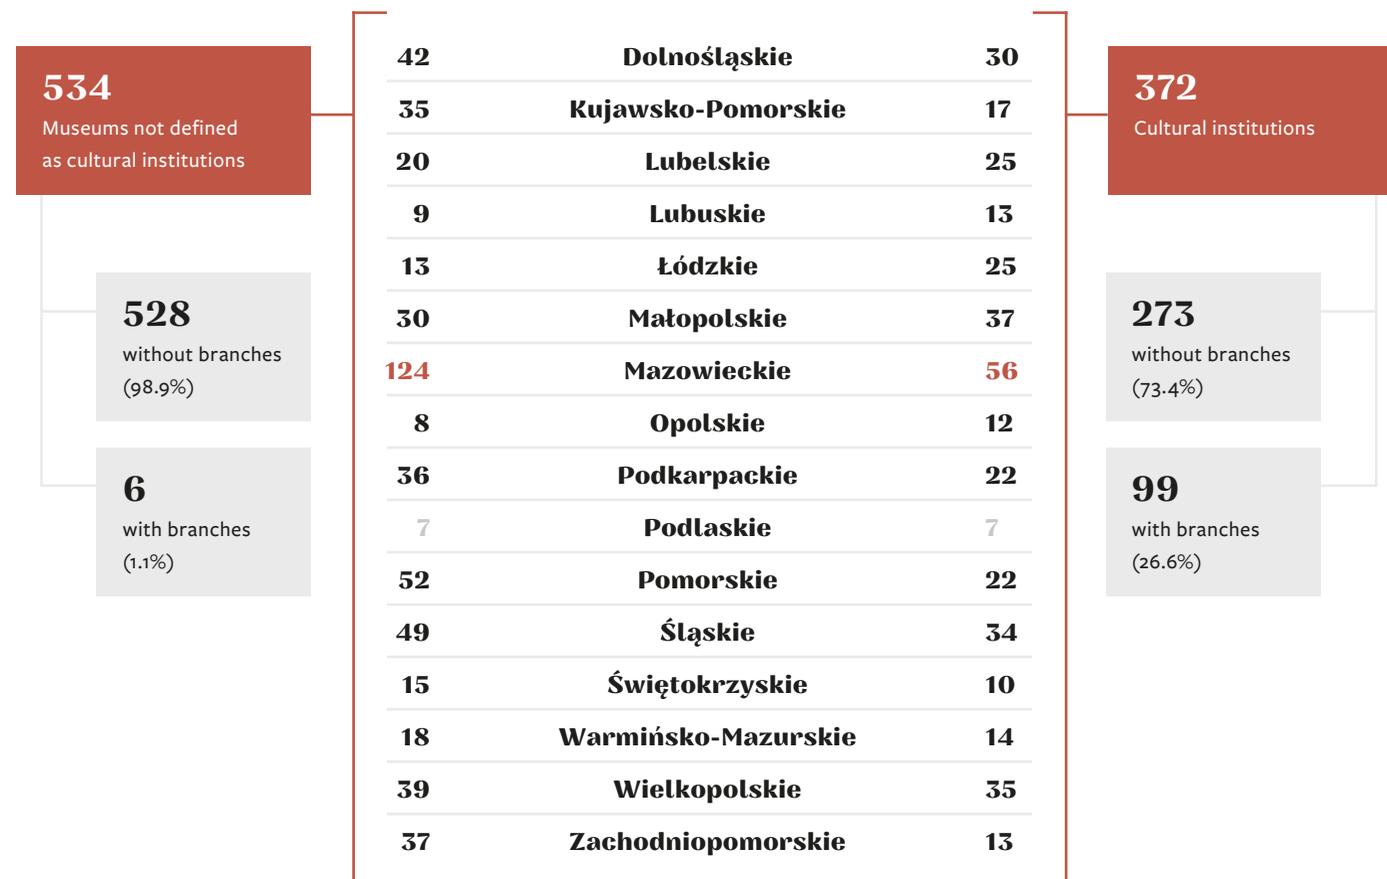

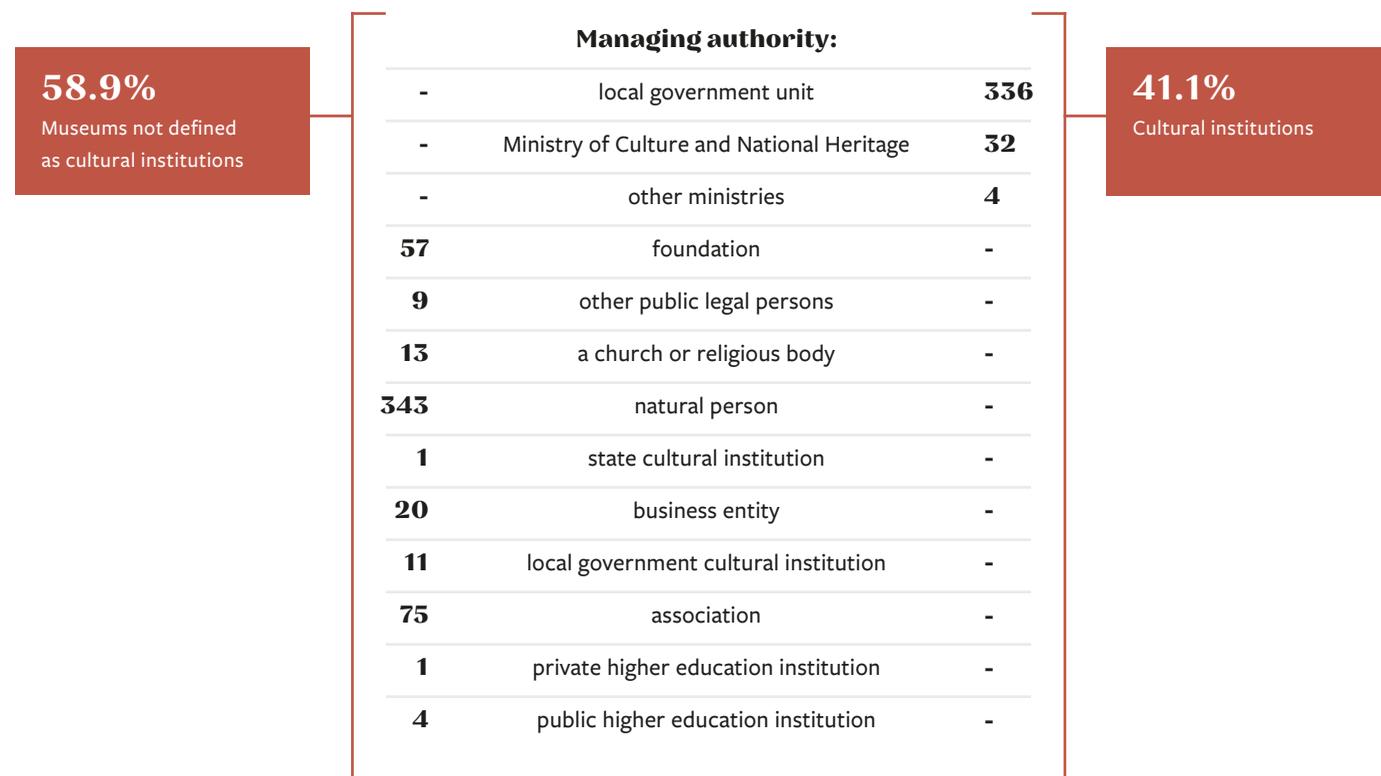

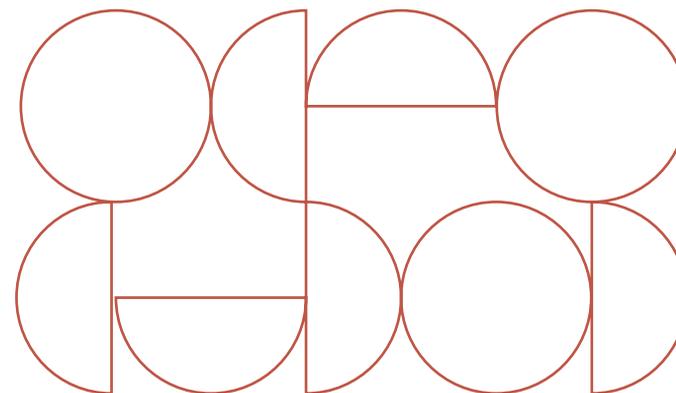

Figure 3. Managing authorities for cultural institutions and museums not defined as cultural institutions (as of 4 January 2021)

The second group of institutions included in the survey are **entities conducting museum activities**, which cannot be defined as museums within the purview of the Act on Museums. Based on the data collected by NIMOZ as of 4 January 2021, there were **324** of such entities in Poland, of which 19 operated as **cultural institutions** managed by local governments, while nearly 95% did not have the status of a cultural institution. In the latter group, most entities (95) were operated by a church or religious body, and nearly one fifth (51) by public and private higher education institutions. Equal numbers of entities were managed by associations or foundations and by local government cultural institutions (42 in each group). A slightly smaller number was operated by natural persons (32) and other public legal persons (23). The least represented were the ones managed by business entities (16) and state cultural institutions (4).

Most entities conducting museum activities operated in the Małopolskie (56), Mazowieckie (49), and Wielkopolskie (35) voivodeships. Relatively large numbers could also be found in the Podkarpackie (25), Dolnośląskie (24), and Kujawsko-Pomorskie (21) voivodeships.

Only three entities of this type featured a more complex organisational structure (branches).

3.

Research areas

The questionnaires and their thematic scope were based on the Polish and international guidelines for museum statistics such as:

- » K-02 questionnaire of Statistics Poland;
- » Questionnaire by the European Group on Museum Statistics (EGMUS);
- » ISO standards for museum statistics.

As a result of internal consultations at NIMOZ, four primary research areas and 14 sub-areas were identified which cover all aspects in the operation of museums and entities conducting museum activities. They are studied annually, with a more detailed analysis conducted every four years. Given the less dynamic character of changes in infrastructure, safety and security, this area constitutes an exception and is examined every four years only.

Figure 4. Research areas in the *Museum Statistics* project

4.

Research tools

The survey is conducted using **Computer Assisted Web Interviewing (CAWI)** and a dedicated statistical system with the database of museums and entities conducting museum activities.

Given the broad thematic scope of the identified areas, two types of research tools are used:

- » **Primary questionnaires** – with unaltered scope, dedicated to aspects monitored annually;
- » **Thematic questionnaires** – for a more detailed analysis of aspects selected from the primary questionnaire, conducted every four years.

Thematic questionnaires provide for an in-depth exploration of areas that do not need to be monitored on an annual basis – changes in selected aspects become visible in the perspective of several years.

Both research tools are accordingly adapted to:

- » Cultural institutions;
- » Entities without the status of a cultural institution.

This differentiation of forms by institution type was necessary due to differences in how both types are organised and managed.

The 2020 survey was conducted between 30 March and 30 April 2021. The area studied in detail in the thematic survey for this period was **Collections**.

II Museums in 2020

1.

General information

1.1. Introduction

A total of 215 museums with their statutes or rules and regulations approved by the Ministry of Culture and National Heritage took part in the 2020 edition of *Museum Statistics*. They accounted for nearly a quarter of all museum institutions within the purview of the Act on Museums of 21 November 1996.¹ The *Museum Statistics* survey was conducted at the end of March and in April 2021.

Of all museums participating in this edition of the project, most were located in the Mazowieckie voivodeship (17.7%), while the Podlaskie voivodeship was represented the least (0.9%). Over half of the studied museums (45.6%) operated in administrative areas with populations between 10,001 and 100,000 people. Just over one fifth was based in large cities with more than 500,000 residents. The vast majority of the studied museums (nearly 90%) were active in urban areas.

Open-air museums accounted for only 16,3% of all institutions that submitted their questionnaires.

Most museums participating in the study did not have museum branches. Less than 30% reported having a more complex organisational structure and operating a total of 173 branches. Nearly 60% of the museums described their collection profile as interdisciplinary. Those with a homogeneous profile were primarily history museums (nearly 24%), with an equally large number describing their collection profile as different from the listed categories (22.7%). Similar group sizes were reported for ethnography and anthropology museums (14.8%), science and technology museums (12.5%), and specialised museums (10.2%). Archaeology and

natural history museums were the least represented in the studied group (3.4% and only 1.1%, respectively).

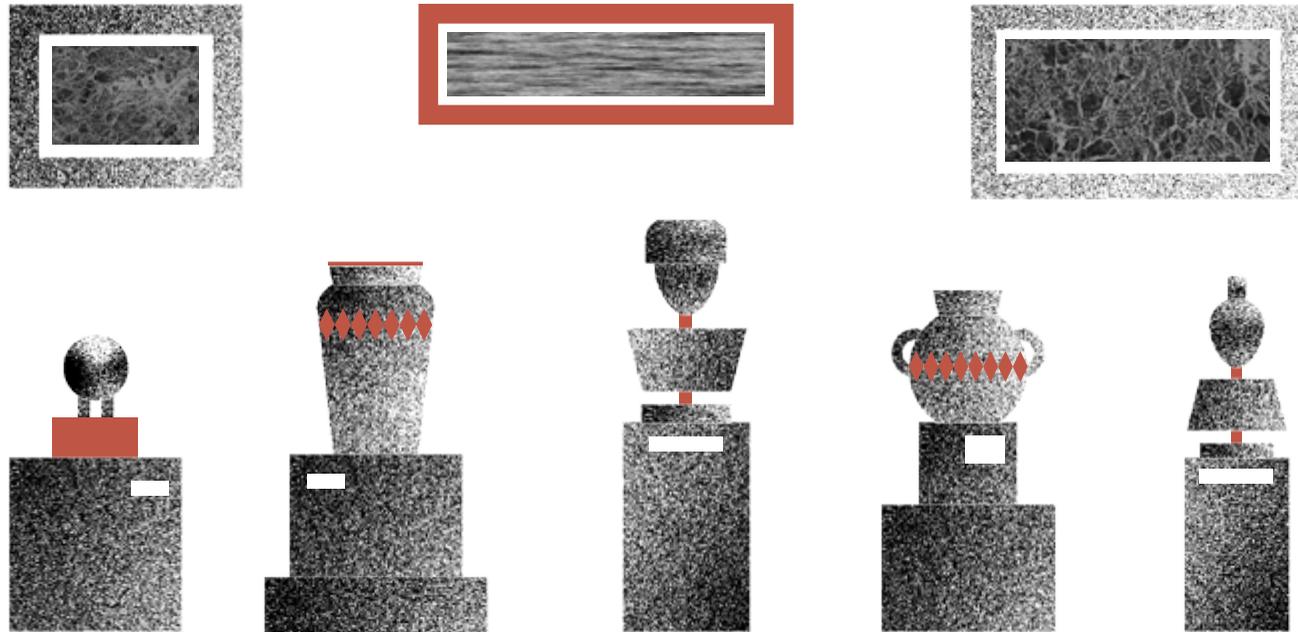

The vast majority of institutions participating in the study (nearly 90%) were publicly funded, while those relying on private funding accounted for 7%. Only 3.3% of all studied museums functioned as public-private partnerships. With more than 75% of the museums operated by local governments, the latter prevailed as organising authorities. State institutions and museums without legal personality accounted for a little over 12% each. The former were organised by the Ministry of Culture and National Heritage, as well as other ministries, while the latter mostly by foundations and associations (altogether over 5% of all institutions). A total of 14% were museums co-managed by more than one entity.

¹The List of Museums by the Ministry of Culture and National Heritage (as of 4 January 2021)

Almost 41% of the respondents were ‘registered museums’, i.e. entered in the State Register of Museums (in Polish: *Państwowy Rejestr Muzeów*, PRM). Pursuant to the Act on Museums of 21 November 1996, this status is granted to institutions offering high-quality museum activities and collections of great significance for national heritage.

Most museums (over 90%) indicated their statute as a basis for the museum operations, with only 7.4% pointing to their rules and regulations.

Nearly 95% of the museums declared running their own websites. Half of those that did, reported more than 118,256 page views over the year, while the median value of unique visitors amounted to 34,310.

Dissemination activities

2.1. Introduction

In 2020, permanent exhibitions were held by 93% of the studied museums, of which 36.6% modernised their exhibitions in the reporting year. Nearly 90% organised also temporary exhibitions – eight on average (the median value was six).

Most museums prepared temporary exhibitions on their own – three fifths of such exhibitions were held individually. Co-organised exhibitions accounted for 16.6% of temporary exhibitions in the reporting year – a slightly lower number compared to those loaned from Poland (17.8% of temporary exhibitions). Exhibitions loaned from abroad constituted the smallest group (only 1.8% of all exhibitions). Outdoor exhibitions accounted for less than 17%, even though nearly half of the respondents declared the organisation of such exhibitions in the questionnaire. Outdoor events were held by over half of the institutions (54.8%).

In 2020, online exhibitions were organised by nearly half of the studied museums (49.8%) – a significant increase compared to one fifth of the museums in the previous reporting year (2019). The average number of the exhibitions presented online came close to four, while the average number of visits to these exhibitions was 22,613. Nearly one tenth of the institutions participating in the study held temporary exhibitions abroad, mostly in Japan and the Czech Republic.

Of all studied museums, less than 70% issued publications with the ISBN/ISSN number. Books were published by more than half of the museums, with over a quarter of them releasing books online. Only 23.3% of the respondents published journals in the reporting year; however, nearly half of them made their journals available online.

Research and scientific activities were conducted by approximately half of the museums and research programmes by less than 45%. Most of the latter were implemented independently (77.4%), with less than a quarter held in co-operation with other institutions.

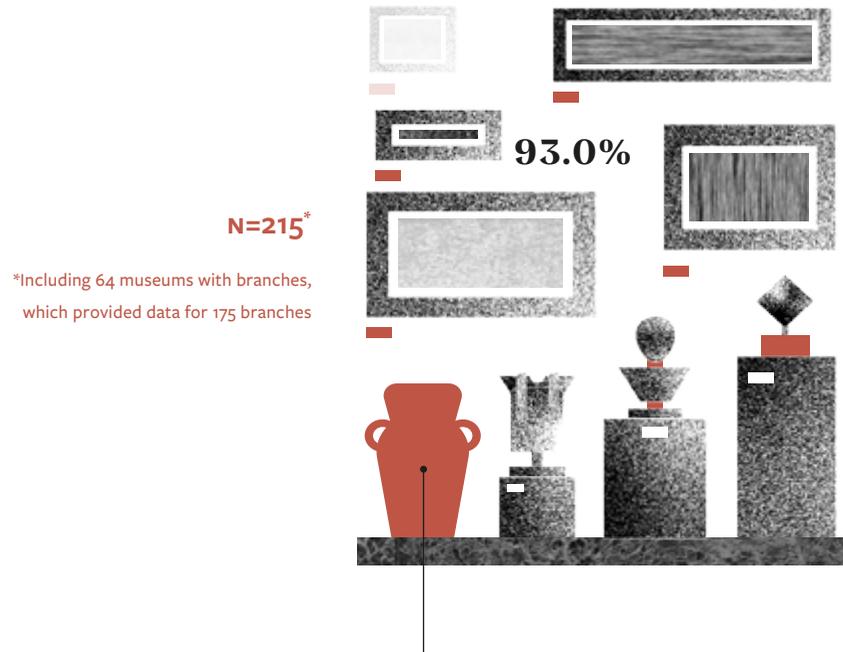

The vast majority of the studied museums (94%) were involved in promoting science and education. The median of participants in all educational activities amounted to 2,857. Over 95% of institutions active in this area organised museum lessons and workshops. Most museums offered guided tours (78.5%) and lectures (76.9%), while more than half held concerts. Activities aimed at the promotion of science and education were also held online, with nearly 75% of the respondents organising museum lessons and virtual guided tours.

Collections

3.1. Introduction

In the studied group, the median value for objects entered in the inventories was 11,925. The increase in new museum collection objects, shown as the average ratio of objects entered in the inventories in the reporting year to all objects in the inventories, was 4%. Half of the museums with long-term loan registers had 315 or more objects registered as long-term loans. On average, the percentage of long-term loans registered in the reporting year compared to all long-term loans was 11%, while the average ratio of long-term loans removed from the registers in the reporting year to all long-term loans was nearly 30%.

Nearly 70% of the studied museums loaned objects short term. The median value for short-term loans-in and loans-out was 147 and 41, respectively.

Over 75% of the institutions had digitised objects. In the group of museums with electronic databases, the median value for all digitised objects was 9,980, while that of objects digitised in the reporting year alone was 439. More than one fifth of museums made their collections available through online catalogues, while nearly 9% were in the process of developing such a catalogue.

In the reporting year, conservation treatments were carried out by nearly 75% of the museums. Complete conservation was performed by almost 60% of all respondents, with half of them having 29 or more objects subjected to complete conservation treatments in 2020.

Of all museums participating in the study, 10.7% reported losses in their collections or collections under their care due to theft, an object gone missing, damage (including fire), or other incidents, while less than 6% reported material losses with respect to other property. The median value for objects lost was assessed at 7.5. Most objects were reported missing (almost 85% of all cases). Nearly 9% of the museums managed to find objects previously reported as objects lost.

4.

Museum management and organisation

4.1. Introduction

Due to restrictions related to COVID-19, museums remained closed to the public for a certain part of the reporting year. When cultural activities could be resumed, some institutions made their facilities or adjacent areas available to visitors. Most museums (77.3%) offered a free admission day, while more than one tenth did not charge admission fees at all. The average ratio of free admissions to overall attendance was over 40%. Among the institutions that participated in the study, accounting for less than a quarter of all museums within the purview of the Act on Museums, the median value for overall attendance was the highest in the Pomorskie and Lubelskie voivodeships.

In 2020, the studied museums employed more women than men. Half of them offered the average gross remuneration of PLN 4,265 or more per employee. The museums employed people under civil law contracts in addition to permanent employees – the ratio of the former to the latter was 86% on average. Museums also collaborated with volunteers, with the average ratio of volunteers to permanent employees amounting to 8%. Of all museums defined as cultural institutions, 95.1% sent their employees to courses and training, while more than 26% to university or doctoral studies.

Half of the museums defined as cultural institutions reported revenues of PLN 3,298,928.50 or more. The median value for the ratio of own contributions to overall revenues was slightly above 4%, while that of the funding provided by the organising authority compared to overall revenues was over 80%. Ticket sales accounted for the largest part of own contributions, with the average ratio of revenues in this

category to own contributions nearing 40%. Comparable revenues were obtained from the rental of museum space and publishing (with the average ratio of each category to own contributions amounting to over 13%).

More than 40% of the museums received requests for access to public information. The vast majority of them (over 90%) were accepted without reservation and only 2.2% of the requests were rejected. Requests for the re-use of public information were submitted to just over one fifth of the museums, with over 80% of them accepted without reservation. More than half of the institutions received requests for access to digital representations of museum objects. Of all requests, only 3.8% were rejected.

III Entities conducting museum activities in 2020

1.

General information

Entities conducting museums activities are institutions that do not have their statute or rules and regulations approved by the Ministry of Culture and National Heritage, and therefore cannot be recognised as museums within the purview of the Act on Museums of 21 November 1996. A total of 33 entities participated in this edition of the *Museum Statistics* project. Based on the database of entities maintained by NIMOZ for internal purposes, 324 entities of this type operated in Poland in 2020 (as of 4 January 2021). Consequently, the institutions that took part in the survey accounted for over 10% of the entire group.

The vast majority of entities participating in the survey held permanent exhibitions (93.9%), with over 30% modernising them in the reporting year. Nearly 60% also organised temporary exhibitions, with half holding two or more exhibitions of this type. Most of them were prepared individually (over 60%), almost 30% were co-organised, and only 6.5% were loaned from Poland. Outdoor exhibitions accounted for just over 13% of temporary exhibitions, even though over 30% of the entities declared the organisation of such exhibitions in the questionnaire. Outdoor events were held by one quarter of the entities. In the reporting year, only one entity organised a temporary exhibition abroad, while one third of the studied institutions offered exhibitions online.

Of all entities conducting museum activities, less than 20% issued publications with the ISBN/ISSN number. Research and scientific activities were conducted by one quarter, and research programmes by over 18% of the studied institutions.

Most of the entities (84.8%) were involved in promoting science and education. Half of those offering educational activities attracted 556 or more participants. Over 90% of the institutions active in this area organised guided tours, and three quarters held museum lessons and workshops. More than 40% offered lectures, while over one fifth held concerts.

The vast majority of entities (92.9%) declared cataloguing their collections in compliance with the Regulation of the Minister of Culture of 30 August 2004 on the scope, forms and methods of cataloguing historical objects in museums. The median value for objects entered in the inventories was 2,267. Nearly half of the entities (45.2%) loaned objects short term in the reporting year.

Nearly 60% of the entities had digitised objects, with half of them reporting more than 1,414 digitised objects in total. Almost one tenth made their collections available through online catalogues, while more than one fifth were in the process of developing such a catalogue.

Conservation treatments were carried out by less than 30% of the studied institutions. No entity reported losses in their collections or collections under their care due to theft, an object gone missing, damage (including fire), or other incidents; however, 3% reported material losses with respect to other property.

While only 12.1% of the studied entities offered a free admission day, nearly half did not charge admission fees at all. The average ratio of free admissions to overall attendance was almost 60%.
